

Quizizz vs Kahoot!

Quizizz is a Learning platform that offers multiple tools to make a classroom interactive and engaging. Teachers can create/share lessons, use lessons from the library, conduct formative assessments, and assign homework. [Quizizz Privacy Policy](#)

Kahoot! is a learning platform that uses quiz-style games to help students learn in a fun way. Teachers can create/share quizzes or use from the library, conduct formative assessments, and assign homework. [Kahoot! Privacy Policy](#)

Both Quizizz and Kahoot! do not accumulate personal information about any child for distribution, sharing, or selling. They both comply with the Children's Online Privacy Protection Act ("COPPA"), the Family Educational Rights Privacy Act ("FERPA").

I think Quizizz has a more secure policy when it comes to dealing with third parties. Quizizz has a limited list of third parties, and it specifies in their policy the list of third party services that may process personal data on our behalf "can be found [here](#)." If Quizizz needs to disclose your information to a third party for a legal reason, they will let you know in advance "unless we are legally prohibited from doing so."

Kahoot's Policy of the third parties is kind of vague. Although, they say the use of the third party applications is optional, third Party Applications may have their own privacy policies that apply to you when you choose to use these Third Party Applications, including but not limited to Google. Those Third Party Applications may collect Personal Information about you although those information are not shared directly by Kahoot!

It is noticeable that both Kahoot! and Quizizz have comprehensive overarching legislation in the Europe Union in comparison to the US. This is due to the fact that there is no federal data privacy law like GDPR (General Data protection Regulation) in the United States.
